Sequence 56777, Application US/10449902

Publication No. US20060123505A1

GENERAL INFORMATION:
APPLICANT: National Institute of Agrobiological Sciences.
APPLICANT: Bio-oriented Technology Research Advancement Instit
APPLICANT: The Institute of Physical and Chemical Research.
APPLICANT: Foundation for Advancement of International Science
APPLICANT: Foundation for Advancement of International Science
TITLE OF INVENTION: FULL-LENGTH PLANT CDNA AND USES THEREOF
FILE REFERENCE: MOA-A0205Y1-US
CURRENT APPLICATION NUMBER: US/10/449,902
CURRENT APPLICATION NUMBER: US/10/449,902
PRIOR APPLICATION NUMBER: JP 2002-203269
PRIOR FILING DATE: 2003-05-30

Publication No. US20060160159A1

GENERAL INFORMATION:
APPLICANT: Handfield, Martin
APPLICANT: Hillman, Jeffrey
APPLICANT: Progulske-Fox, Ann
TITLE OF INVENTION: Identification of Actinobacillus actinomycetemcomitans
TITLE OF INVENTION: Antigens for Use in the Diagnosis, Treatment, and Monitoring
TITLE OF INVENTION: of Periodontal Diseases
FILE REFERENCE: WHHB01-662C
CURRENT APPLICATION NUMBER: US/11/333,747A
CURRENT FILING DATE: 2006-01-17
PRIOR APPLICATION NUMBER: US 09/995493
PRIOR FILING DATE: 2001-11-28
PRIOR APPLICATION NUMBER: PCT/US02/37235
PRIOR FILING DATE: 2002-11-20
NUMBER OF SEQ ID NOS: 234
SOFTWARE: Patentin version 3.0
SEQ ID NO 22
LENGTH: 365
TYPE: PAT
ORGANISM: Actinobacillus actinomycetemcomitans

                                                                                   The present invention relates to motoneuronotrophic factor peptide analogue, where the peptide analogue enhances the viability of motor neurons. The methods and compositions of the present invention are useful for promoting motor neuron viability and axon degeneration, target muscle reinnervation, treating peripheral nerve injuries, treating neurodegenerative disease and in wound healing. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                     New motoneuronotrophic factor peptide analogue enhancing the viability motor neurons, useful for target muscle reinnervation, treating peripheral nerve injuries or neurodegenerative diseases and in wound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Unidentified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 7 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   neurons. The methods and compositions of the present invention are useful for promoting motor neuron viability and axon degeneration, target muscle reinnervation, treating peripheral nerve injuries, treating neurodegenerative disease and in wound healing. The present sequence represents WMLSAFS domain motoneuronotrophic factor peptide analogue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              peripheral nerve;

                                                                                                                                                                                                                                                              This sequence, represents a fragment of a novel human motoneurotrophic factor, MNTF1-F6. Such factors are used to promote regeneration of the axon of a motoneurone, to diagnose and treat motoneurone disease in a mammal or to accelerate wound healing whilst concomitantly minimising or inhibiting scar tissue and/or reloid formation in an area associated with a wound. For promoting axonal regeneration, the polypeptide is administered at a concentration of 5 ng-50 mg, whereas for inhibiting hereditary motoneurone disease, the dosage is 5-100 (especially 30-50) ng
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              27-SEP-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to motoneuronotrophic factor peptide analogue, where the peptide analogue enhances the viability of motor neurons. The methods and compositions of the present invention are useful for promoting motor neuron viability and axon degeneration, target muscle reinnervation, treating peripheral nerve injuries, treating neurodegenerative disease and in wound healing. The present sequence represents MNTF1-F6 33 mer motoneuronotrophic factor peptide analogue.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL040-ABL16175) and the encoded proteins (ABE5737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  N-PSDB; ABL07470

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sugar
```

The invention relates to a method of screening and/or diagnosing a cardiovascular disorder (CD) in a subject which comprises detecting and/or quantifying the level of a polypeptide in a biological sample from the subject and comparing the level to that of control sample. The method is useful for screening, diagnosing and treating coronary artery disease, biliary cirrhosis, gallstones, celiac disease, irritable bowel syndrome, diabetes, scleroderma, nausea, vomiting, constipation and diarrhea. The method is rapid and efficient. The present sequence represents a cardiovascular disorder plasma protein tryptic fragment.

Screening and/or diagnosing cardiovascular disorder in subject involves detecting and/or quantifying level of polypeptide in biological sample from subject and comparing with control sample.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                     CC lubricating molety and has a polypeptide sequence comprising 1-76 repeats CC of a motif having at least 50% identity to the sequence KEPAPTT CC (AAB29774). The invention also relates to a nucleic acid encoding a human CC MSF-derived tribonectin; a biocompatible composition comprising a human CC tribonectin for inhibiting tissue adhesion formation; and a method of CC diagnosing osteoarthritis or a predisposition to osteoarthritis by CC measuring the amount of MSF or its fragment in a biological sample of a CC indicates the presence of or predisposition to developing osteoarthritis. CC indicates the presence of or predisposition to developing osteoarthritis. CC indicates the presence of or predisposition to developing osteoarthritis. CC osteoarthritis, where they may be used for lubricating mammalian joints, CC such as articulating joints of humans, dogs or horses. The tribonectin, CC when formulated as a membrane, foam, gel or fibre, is useful for CC inhibiting adhesion between two surfaces such as the injured tissues of a CC mammal, where the injury is caused by a surgical insertion or trauma, or can artificial device e.g., an orthopaedic implant. In particular, one of the surfaces is pericardial tissue. DNA encoding a tribonectin may be considered as the present sequence represents a fragment of a human MSF-derived tribonectin sequence represents a fragment of a human MSF-derived tribonectin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human tribonectin; MSF; megakaryocyte stimulating factor; alternative splicing; joint boundary lubricant; O-linked oligosaccharide; osteoarthritis; tribosupplementation; tissue adhesion inhibition; friction coefficient reduction; gene therapy; antiarthritic; osteopathic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a human tribonectin which is a product of alternative splicing of the human MSF (megakaryocyte stimulating factor)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; Fig 1; 47pp; English

                                                           dermatological; neuroprotective; cardiant; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic and antiangiogenic. The polymuclectides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Polymuclectides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of haematopoietic cells, autoimmune disorders, allergic reactions; graft versus host disease and organ rejection, modulate haemostatic or thrombolytic activity, modulate inflammation, cancers, cardiovascular disorders, neurological disease and bacterial or viral infections. The peptides, nucleotides, antibodies, agonists and antagonists may be also be used in drug screens. AAC78449 to AAC78457 and AAB44240 represent sequences used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       dermatological; neuroprotective; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic; antiangiogenic; gene therapy; inflammation; immune disorder; haematopoietic cell disorder; autoimmune disorder; allergic reaction; graft versus host disease; organ rejection; haemostatic; thrombolytic; cardiovascular disorder; infection; neurological disease; drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAB43398 to AAB44239. The proteins can have activities based on the tissues and cells the genes are expressed in Example of activities include: cytostatic; proliferative, vulnerary, immunomodulator; antidiabetic; antiasthmatic; antirheumatic; antirheumatic; antirheumatic; antirheumatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           diagnosis; cytostatic; proliferative; vulnerary; immunomodulator;

                                                                                                                                              The present invention provides the protein and coding sequences of human superficial zone protein (SZP). The protein is involved in the lubrication of joints, and the sequences can be used in the treatment of degenerative joint conditions or to delay symptoms of a degenerative joint condition, e.g. osteoarthritis, rheumatoid arthritis, gout, psoriatic arthritis, reactive arthritis, viral or post viral arthritis, spondylarthritis, juvenile arthritis, synovitis, tendontitis, systemic lupus erythematosus, CACP, osteoporosis or trauma. The present sequence is the protein encoded by the human 3' cartilage SZP cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New purified superficial zone protein (SZP) polypeptides, useful for treating degenerative joint conditions, e.g. osteoarthritis, rheumatoid arthritis, gout, spondylarthritis, synovitis, tendonitis, lupus, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         degenerative joint condition; arthritis; osteoporosis; trauma; CACP; chondroitin sulphate substitution consensus; antiarthritic; antirheumatic; osteopathic; antigout; antiinflammatory; dermatological;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                              CC lubricating molety and has a polypeptide sequence comprising 1-76 repeats CC of a motif having at least 50% identity to the sequence KEPAPT CC (AAB29774). The invention also relates to a nucleic acid encoding a human CC MSF-derived tribonectin; a biocompatible composition comprising a human CC diagnosing osteoarthritis or a predisposition formation; and a method of CC diagnosing osteoarthritis or a predisposition to osteoarthritis by CC measuring the amount of MSF or its fragment in a biological sample of a CC indicates the presence of or predisposition to developing osteoarthritis. CC The tribonectin and DNA encoding it are useful in the treatment of CC such as articulating joints of humans, dogs or horses. The tribonectin, CC when formulated as a membrane, foam, gel or fibre, is useful for CC inhibiting adhesion between two surfaces such as the injured tissues of a CC mammal, where the injury is caused by a surgical insertion or trauma, or CC an artificial device e.g., an orthopaedic implant. In particular, one of the surfaces is pericardial tissue. DNA encoding a tribonectin may be used in gene therapy. The present sequence represents a substantial cc portion of a human MSF-derived tribonectin

The nucleotides and polypeptides are useful as diagnostic markers or therapeutic target for the diseases or morbid states. They are also useful for treating osteoporosis, neurological diseases, Alzheimer's diseases, Parkinson's diseases, neurological concers. This sequence corresponds to a protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated lubricin protein. A lubricin containing composition is useful for treating a subject which involves administering same to a tissue (e.g. cartilage, synovium, meniscus, tendon, peritoneum, pericardium, or pleura (preferably cartilage)) of the subject (e.g. mouse, rat, cat, dog, horse or human (preferably human)). The above method further involves providing an anasthetic, antiinflammatory drug and antibiotic to the subject, aspirating fluid from the subject, washing tissue of the subject and imaging tissue of the subject. The protein is useful for treating osteoarthritis or rheumatoid subject. The protein is useful for treating osteoarthritis or rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         arthritis, or as lubricants, anti-adhesive agent or intra articular supplements for synovial joints, meniscus, tendon, peritoneum, pericardium or pleura. An anti-lubricin antibody is useful for treating cancer e.g. synoviomas. The present sequence represents the amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel recombinant lubricin useful for treating osteoarthritis or rheumatoid arthritis, or as lubricants, anti-adhesive agent or intra articular supplements for synovial joints, meniscus, tendon, peritoneum, pericardium or pleura.
                                                                                                                lubricin; antiarthritic; osteopathic; antirheumatic; cytostatic; cardiant; respiratory-gen.; osteoarthritis; rheumatoid arthritis neoplasm; musculoskeletal disease; immune disorder; inflammation

The above method further involves providing an anasthetic, antiinflammatory drug and antibiotic to the subject, aspirating fluid from the subject, washing tissue of the subject and inaging tissue of the subject. The protein is useful for treating osteoarthritis or rheumatoid arthritis, or as lubricants, anti-adhesive agent or intra articular supplements for synovial joints, meniscus, tendon, peritoneum, pericardium or pleura. An anti-lubricin antibody is useful for treating cancer e.g. synoviomas. The present sequence represents the amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel recombinant lubricin useful for treating osteoarthritis or rheumatoid arthritis, or as lubricants, anti-adhesive agent or intra articular supplements for synovial joints, meniscus, tendon, peritoneum, pericardium or pleura.

A lubricin containing composition is useful for treating a subject which involves administering same to a tissue (e.g. cartilage, synovium, meniscus, tendon, peritoneum, pericardium, or pleura (preferably cartilage)) of the subject (e.g. mouse, rat, cat, dog, horse or human (preferably human)). The above method further involves providing an anasthetic, antiinflammatory drug and antibiotic to the subject, aspirating fluid from the subject, washing tissue of the subject, and imaging tissue of the subject. The protein is useful for treating osteoarthritis or rheumatoid arthritis, or as lubricants, anti-adhesive agent or intra articular supplements for synovial joints, meniscus, tendon, peritoneum, pericardium or pleura. An anti-lubricin antibody is useful for treating cancer e.g. synovicmas. The present sequence represents the amino acid sequence of the PRG4-Lub:3 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel recombinant lubricin useful for treating osteoarthritis or rheumatoid arthritis, or as lubricants, anti-adhesive agent or intra articular supplements for synovial joints, meniscus, tendon, peritoneum,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 subject (e.g. mouse, rat, cat, dog, horse or human (preferably human)). The above method further involves providing an anasthetic, antiinflammatory drug and antibiotic to the subject, aspirating fluid from the subject, washing tissue of the subject and imaging tissue of the subject. The protein is useful for treating osteoarthritis or rheumatoid arthritis, or as lubricants, anti-adhesive agent or intra articular supplements for synovial joints, meniscus, tendon, periconeum, pericardium or pleura. An anti-lubricin antibody is useful for treating cancer e.g. synoviomas. The present sequence represents the amino acid sequence of the PRG4-Lub:4 protein.
        The invention relates to an isolated lubricin protein. A lubricin containing composition is useful for treating a subject which involves administering same to a tissue (e.g. cartilage, synovium, meniscus, tendon, peritoneum, pericardium, or pleura (preferably cartilage) of the subject (e.g. mouse, rat, cat, dog, horse or human (preferably human)). The above method further involves providing an anasthetic, antiinflammatory drug and antibiotic to the subject, aspirating fluid from the subject, washing tissue of the subject and imaging tissue of the subject. The protein is useful for treating osteoarthritis or rheumatoid subject. The protein is useful for treating osteoarthritis or rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 administering same to a tissue (e.g. cartilage, synovium, meniscus, tendon, peritoneum, pericardium, or pleura (preferably cartilage)) of the subject (e.g. mouse, rat, cat, dog, horse or human (preferably human)).
                                                                                                                                                                                                                                                                       Novel recombinant lubricin useful for treating osteoarthritis or rheumatoid arthritis, or as lubricants, anti-adhesive agent or is articular supplements for synovial joints, meniscus, tendon, per
                                                                                                                                                                                                                       Claim 11;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   14-AUG-2003; 2003US-0495741P
